Glucosamine + MSM® Forte™
Joint health formula

DESCRIPTION
Glucosamine + MSM® Forte™ capsules provided by Douglas Laboratories contain 500 mg of pure glucosamine sulfate and 250 mg of methylsulfonylmethane (MSM®). Ascorbic acid, proanthocyanidins, and bromelain are also included to provide additional aid in maintaining the health of aging joints.

FUNCTIONS
Glucosamine is a naturally occurring amino sugar found in glycosaminoglycans, integral components of the proteoglycans found in joint cartilage. Proteoglycans are large carbohydrate rich structures that provide resiliency, load distribution, shock-absorbing, compressive and lubricating properties to joints and connective tissues. The availability of glucosamine is an integral part of the synthesis of glycosaminoglycans and proteoglycans that are necessary during the constant remodeling that aging cartilage undergoes. Thus, the maintenance of healthy aging cartilage may be improved with enhanced deposition of glycosaminoglycans and proteoglycans.

Dietary glucosamine serves as an immediate precursor for glycosaminoglycan synthesis, and also stimulates incorporation of other precursors into the connective tissue matrix. Bioavailability of oral glucosamine sulfate is excellent. It is absorbed intact, and utilized very quickly by all tissues, including connective tissues. Glucosamine sulfate is more efficiently used for connective tissue metabolism than other glucosamine sources, such as cartilage extracts or chondroitin sulfate. In summary, glucosamine sulfate is a well recognized, highly effective source of glucosamine for glycosaminoglycan and proteoglycan synthesis in all connective tissues, such as cartilage, ligaments, tendons, skin, and bone.

MSM®, a derivative of DMSO, is a naturally occurring compound of biologically available sulfur, an indispensable element in human nutrition. As part of the amino acids methionine and cysteine, sulfur is required for the structural integrity and function of almost every protein in the body, as well as the glycosaminoglycans of cartilage and other connective tissue. Dietary MSM® serves as a versatile donor of metabolically active sulfur for the synthesis of numerous organosulfur compounds and proteins in the body. As such, MSM® helps maintain normal immune response, lung function, connective tissue metabolism, and muscle contraction. MSM® occurs naturally in a variety of foods, such as fruits, vegetables, cereal grains, milk, and fish. However, MSM® is volatile and easily lost during cooking. MSM® is very well absorbed by the intestinal tract and rapidly distributed within the body.

Bromelain, a protease from the pineapple plant, reduces the production of proinflammatory prostaglandins by modulating the arachidonate cascade. Its ability to modulate the body’s normal inflammatory processes may reduce the discomfort associated with aging joints.

Proanthocyanidins, such as those found in red wine, are natural polyphenolic bioflavonoids that are widespread in nature and highly regarded for their strong antioxidant properties, as well as their functions in supporting the body’s connective tissues. They have been shown to bind with collagen fibers, thereby protecting from premature degradation. This helps maintain the natural elasticity of collagen in skin, joints, arteries, capillaries, and other connective tissues.

Although vitamin C has numerous biological functions, foremost, it is essential for the synthesis of collagen and glycosaminoglycan which are the building materials of all connective tissues, such as joint cartilage, tendons, blood vessels, skin, and bone. Ascorbic acid (vitamin C) is the required coenzyme for two groups of enzymes that catalyze the cross linking of collagen fibers - lysyl hydroxylases and prolyl hydroxylases. Consequently, vitamin C is essential for the normal structure and function of connective tissue.

INDICATIONS
Glucosamine + MSM® Forte™ capsules may be a useful nutritional adjunct for individuals who wish to support the structure and function of the body’s connective tissues, such as cartilage, bone, tendons, ligaments, and skin.

FORMULA (#83909)
Each capsule contains:
- Vitamin C (Ascorbic Acid)............................50 mg
- Glucosamine Sulfate....................................500 mg
- Methylsulfonylmethane (MSM®) ...............250 mg
- Proanthocyanidins (red wine)........................10 mg
- Bromelain ......................................................10 mg

SUGGESTED USE
One capsule per day or as directed by a physician.

SIDE EFFECTS
None reported.

STORAGE
Store in a cool, dry place, away from direct light. Keep out of reach of children.
